EXECUTIVE SUMMARY

- This report presents the findings from the analysis of the Stack Overflow Developer Survey 2019 data.
- The data provides insights into the current and future trends in technology usage, as well as demographic information about the respondents.
- Key findings include the dominance of JavaScript in programming languages, the popularity of MySQL and PostgreSQL databases, and the widespread use of Linux and Docker platforms.
- Future trends suggest a continued preference for JavaScript and an increasing interest in Python, PostgreSQL, and containerization technologies.
- Demographic data reveals a majority of respondents identifying as men, with the highest number of respondents located in the United States.

INTRODUCTION

- The purpose of this report is to analyze the current and future trends in technology usage, based on data from two datasets.
- The "m5_survey_data_technologies_normalised.csv" dataset provides information on the current usage and future preferences for programming languages, databases, platforms, and web frameworks.
- The "m5_survey_data_demographics.csv" dataset provides demographic information about the respondents, including gender, country, age, and education level.

METHODOLOGY

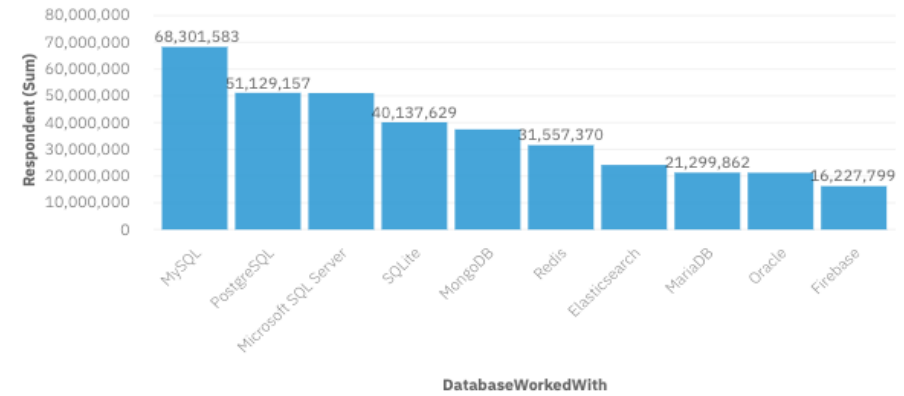

- Data Collection using APIs and web scraping
- Data Wrangling
 - Handling missing values
 - Remove Duplicates
 - Normalization
- Exploratory Data Analysis
 - Examining the distribution of the data
 - Identify outliers
 - Examining the correlations between variables
- Data Visualization

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- JavaScript is currently the most commonly used programming language followed HTML/CSS
- JavaScript remains the most desired programming language for the next year followed by Python
- TypeScript shows a significant demand in the upcoming year

Implications

- A strong focus on web developments among the respondents.
- Data Science is becoming more popular in next year
- Trend toward more robust tools for large-scale JavaScript development.

DATABASE TRENDS

Current Year

Top 10 Database Worked With

Top 10 Database Desires for Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- MySQL is the most popular database. This is followed by Microsoft SQL Server and PostgreSQL.
- PostgreSQL is the most desired database for the next year, followed by MongoDB and Redis.

Implications

- The popularity of MySQL and PostgreSQL suggests that open-source databases are widely adopted in the industry
- This suggests a growing interest in a mix of relational (PostgreSQL) and NoSQL (MongoDB, Redis) databases

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

- Key findings include the dominance of JavaScript in programming languages, the popularity of MySQL and PostgreSQL databases, and the widespread use of Linux and Docker platforms.
- Future trends suggest a continued preference for JavaScript and an increasing interest in Python, PostgreSQL, and containerization technologies.
- Demographic data reveals a majority of respondents identifying as men, with the highest number of respondents located in the United States.

CONCLUSION

- The data suggests a strong focus on web development technologies, with JavaScript-based languages and frameworks being particularly popular.
- Open-source technologies are also widely adopted, as seen in the popularity of languages like Python, platforms like Linux, and databases like MySQL and PostgreSQL
- The popularity of Docker suggests that containerization is a significant trend in the industry.
- Looking forward, the data suggests a future trend towards open-source technologies, containerization, and real-time data analysis
